

a The two numbers do not fall the same way

120 genomes, genes dropped at random; band is the interquartile range

b A lost call names the step that was lost

box across genomes; the point is the pooled share at that level

c Below the quality threshold the policy refuses, rather than answering

dashed grey: assessable_fraction, the share of the frame the genome could speak to.
The supported count is identical under both policies in all 5,263 cells that emit one
