

**a The same count does not license the same fraction**

Five supported GIFTs in each current frame; each square is one frame member

Amino-acid autonomy  
5 supported of 22; fraction = 0.227

Carbohydrate degradation  
5 supported of 18; fraction withheld

state  supported  unsupported

**b Assessability moves the denominator, never a call**

The same five positives remain blue;  
fragmented-genome silence becomes indeterminate

default: every negative is assessed  
supported\_fraction = 0.227; assessable\_fraction = 1.000

60% complete MAG; threshold = 90%  
supported\_fraction = 1.000; assessable\_fraction = 0.227

state  indeterminate  supported  unsupported
