

Encoded repertoire size against genome size

696 GTDB R11-RS232 genomes × 163 current GIFTs. The line is a smooth quasi-binomial expectation and the band its 95% range; no single genome departs from it at a false discovery rate of 0.05; the most extreme in each direction are named.

A deviation is a difference in encoded, curated capabilities relative to this panel and this catalogue, not activity or phenotype. Genomes are treated as independent; related genomes are not.
